

On-Line Renewal Announcement

On-line License Renewal **will not** be ready in time for this year's renewal cycle. Here are a few things that you need to know as we move forward:

The database replacement project was split into two phases. Phase 1 was the design, development and implementation of the License Renewal System. This phase was set to go live on May 15, 2017. After the initial data conversion and testing we encountered several issues that ended up being show stoppers. We tried several work arounds and after consulting with the vendor and my staff, as the Executive Director, I made the decision to delay implementation until December, 2017.

Phase 2, Administration Module, will begin development in June and will run until approximately December 1, 2017. This is the back office part of the database that will allow us to track all of the individual pieces of information that we need to run the Commission smoothly. Once completed, the Renewal Module and the Administration Module will replace our old mainframe system that has been in place for over 30 years.

I am very disappointed to bring you this news, but I want to make sure that the final product is something that both the Commission and the real estate community can be proud of.

Jerry A. Forren

Executive Director
